Trench roller

Articulated steering
that won't dig up soil
when turning.

Key features

The articulated steering of this remote-controlled trench roller keeps all four drums on the ground, meaning it won't dig up your soil when turning. Infrared remote control offers proven compaction results with safe operation. The operator can stand safely outside the trench protected from vibration, dust and noise. The articulated joint increases maneuverability, and the roller stays stable because of its low center of gravity. Variable compaction force allows flexibility depending on the job. Economical to run. Available in two drum sizes.

Applications

These multi-purpose compactors are generally used in a trench compaction environment. They can also be used for general small-scale cohesive and semi-cohesive compaction. The articulated joint enables continuous operation around curved building segments. Trench rollers are used by electricians, plumbers and builders to securely bury cables and pipes and for the compaction of sub bases, foundations, utility excavations, roads and car parks.

Operating Weight:
1450 kg

Overall Width:
560-850 mm

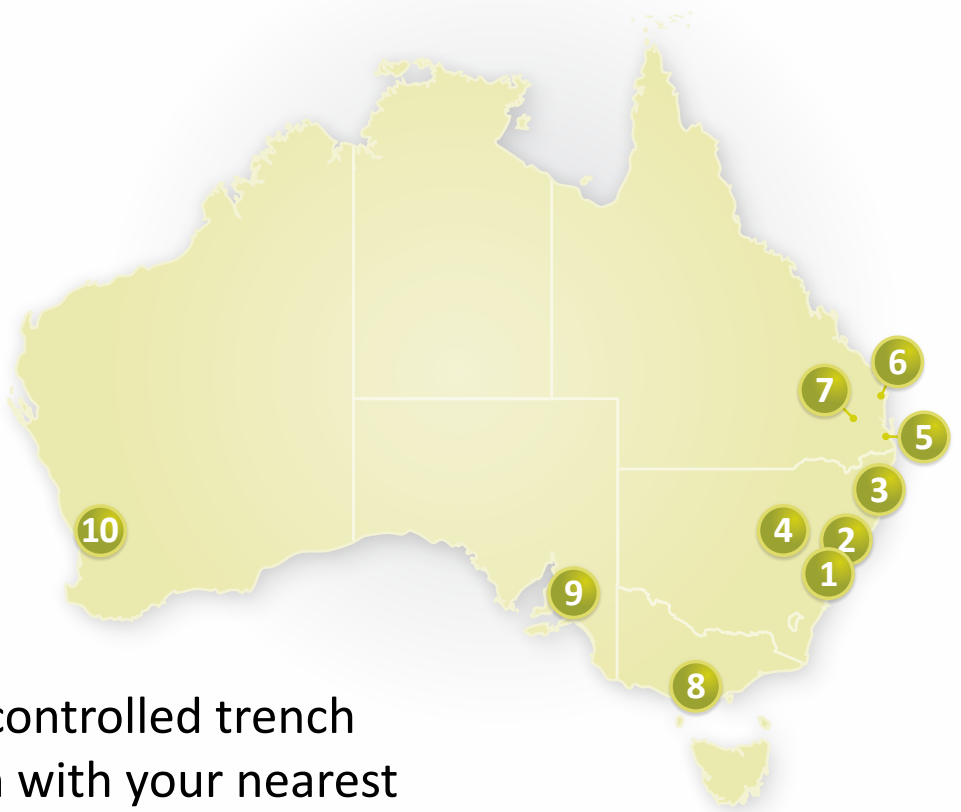

Overall Height:
1270-1320 mm

Overall Length:
1780-1980 mm

Rolling Width:
560-860 mm

We've got you covered.
